

PRODUCT DATA SHEET

Sika® Icosit® KC 330/10

Two-part polyurethane grout for heavy wheel load rail fixing (shore D 75)

PRODUCT DESCRIPTION

Sika® Icosit® KC 330/10 is a flexible two-part polyurethane polymer resin grout. It is used as a vibration absorbing, load-bearing, flexible grout for discrete or continuous trackwork baseplates where particularly high wheel loads are involved.

USES

Sika® Icosit® KC 330/10 may only be used by experienced professionals.

- As a noise and vibration reducing grout under discrete baseplates or continuous embedded rails for high wheel loads (e.g. for heavy cranes, container gantry cranes, working pits and other similar applications).
- As a flexible levelling layer for fixing heavy industrial machines to reduce vibration transmission.

CHARACTERISTICS / ADVANTAGES

- Heavy axle load main line vehicles and loading cranes.
- Noise and vibration suppression.
- Reduces erosion of concrete under baseplate.
- More uniform load distribution into substructure.
- Watertight undersealing.
- Flexible and elastic (shore D 75).
- Damping and compressible.
- Good electrical insulation against stray currents.
- No stress peaks on anchor bolts.
- Good adhesion on various substrates.
- Levels out tolerances.
- Powerful, shear-resistant adhesive.
- Absorbs dynamic stresses and prolongs the life of concrete substructure.
- Long durability, less maintenance.

PRODUCT INFORMATION

Chemical Base	2-part polyurethane grout		
Packaging		Manual application	Machine application
	Part A	6.6 kg container	160 kg drum
	Part B	3.4 kg container	2 x 41.6 kg container
	Part A + B	10 kg	243.2 kg
Colour	Black		
Shelf Life	12 months from date of production		
Storage Conditions	The product must be stored in original, unopened and undamaged sealed packaging in dry conditions at temperatures between +10 °C and +25 °C. Always refer to packaging.		
Density	Part A	1.1 kg/L	(ISO 2811-1)
	Part B	1.2 kg/L	(ISO 2811-1)
	Part A+B	1.1 kg/L	(ISO 1183-1)

TECHNICAL INFORMATION

Shore D Hardness	75 ± 5 (after 28 days) Shore hardness assists with material identification and assessing the curing progress on site.	(ISO 868)
Tensile Strength	25 N/mm ²	
Elongation at Break	30 %	
Chemical Resistance	Long-term resistant against: ▪ Water ▪ Most detergents ▪ Sea water Temporary resistant against: ▪ Mineral oils, diesel fuel Short-term or no resistance against: ▪ Organic solvents (ester, ketone, aromatase) and alcohol ▪ Concentrated acids and lyes Contact Sika® Technical Services for specific information.	
Service Temperature	-40 °C minimum / +80 °C maximum short term maximum +150 °C	

Compressive stiffness

Static stiffness determined according to DIN 45673-1.

Test specimen dimensions: 360 × 160 × 25 mm (pure material value measured without rail)

Preload: 1000 N

Testing speed: 2 kN/s

Maximum load: 50 kN

Bedding figure $k_{stat} = 218 \text{ [(kN/mm)/m]} (\pm 10 \text{ \%})^*$, determined as per the secant method between 17 and 68 kN.

*Deviation of the bedding figure and the curve are $\pm 10 \text{ \%}$.

APPLICATION INFORMATION

Mixing Ratio	Part A : Part B = 100 : 52 (parts by weight)
Consumption	~1.1 kg per litre of volume to be sealed
Layer Thickness	Minimum 15 mm Maximum 60 mm

Product Temperature	Condition product parts before application preferably at +15 °C to assist with flow and curing speed			
Ambient Air Temperature	+5 °C minimum / +35 °C maximum			
Relative Air Humidity	70 % maximum			
Substrate Temperature	+5 °C minimum / +35 °C maximum			
Substrate Moisture Content	Dry			
Pot Life	~8 minutes at + 20 °C (+68 °F) After this time, the mixture becomes unusable. NOTE: Higher temperatures will shorten pot life.			
Curing Time	Tack-free	2 hours at + 20 °C		
	Trafficable	12 hours at + 20 °C		
Curing Rate	Shore D Hardness Values at Different Curing Temperatures			
	Curing Times	Curing at +5 °C	Curing at +23 °C	Curing at +35 °C
	1 hour	-	~50	~55
	2 hours	~35	~55	~60
	3 hours	~45	~60	~65
	4 hours	-	~65	~65
	5 hours	~55	~65	~70
	6 hours	~55	~70	~70
	7 hours	~60	-	-
	1 day	~70	~75	~75
	4 days	~75	~75	~75
	7 days	~75	~75	~75
	14 days	~75	~75	~75
Waiting Time / Overcoating	Waiting time for applying the Product onto primer or coating at +20 °C:			
	Product	Minimum	Maximum	
	Icosit® KC 330 Primer	1 hour	3 days	
	Sikadur®-32+	24 hours	7 days	

SYSTEM INFORMATION

System Structure	▪ Sika® Icosit® KC 330/10 ▪ Sikadur®-32+ for steel surfaces and green concrete ▪ Icosit® KC 330 Primer

VALUE BASE

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

ECOLOGY, HEALTH AND SAFETY

User must read the most recent corresponding Safety Data Sheets (SDS) before using any products. The SDS provides information and advice on the safe handling, storage and disposal of chemical products and contains physical, ecological, toxicological and other safety-related data.

Regulation (EC) No 1907/2006 (REACH) - Mandatory training

As from 24 August 2023 adequate training is required before industrial or professional use of this product. For more information and a link to the training visit www.sika.com/pu-training.

APPLICATION INSTRUCTIONS

NOTES ON INSTALLATION

- Material is moisture-sensitive. Do not warm up in water.
- Apply only to absolutely dry surfaces.
- To achieve the optimum flow performance, condition the material to a temperature of +15 °C before application.
- Undersealing layer thickness must be a minimum 15 mm and maximum 60 mm.
- To achieve maximum adhesion on concrete, loose particles and cement laitance must be removed mechanically (e.g. by blast cleaning or scabbling).
- Use of appropriate Sika® Primers will improve adhesion and durability.
- Do not add any solvents to product.

SUBSTRATE QUALITY

- Substrate must be sound, free from oil, grease, loose and friable particles.
- Apply Sika® Icosit® KC 330/10 only on dry contact surfaces.

SUBSTRATE PREPARATION

- To improve adhesion, apply Sika® Icosit® KC 330 Primer as a primer on absorbent substrates (concrete).
- For corrosion protection, please contact Sika® Technical Services.
- Always comply with the waiting time limits between application of Sika® Icosit® KC 330 Primer and pouring of Sika® Icosit® KC 330/10.

NOTE: Refer to the individual Product Data Sheets for more information.

APPLICATION

Application technique for direct (sleeperless) fixation of trackwork (discrete fixation):

1. Adjust rail to correct line and level.
2. Drill holes for anchor bolts.
3. Apply appropriate Icosit® KC 330 Primer.
4. Fix baseplate loosely to rail foot.
5. Fill bolt holes with pourable epoxy grout, consisting of 1 part by weight Icosit® KC 220/60 TX and 1 part by weight dry quartz sand (0.4–0.7 mm granulometry).
6. Place pre-assembled anchor bolts into grout filled bolt holes.
7. Fit shuttering frame (formwork) treated with release agent around the baseplate by leaving a 5 mm gap between the sides of the baseplate and formwork. Provide a gap on one side of the baseplate and formwork of at least 15 mm wide for pouring. Seal formwork to prevent leakage of grout.
8. Mix Sika® Icosit® KC 330/10 in accordance with mixing instructions.
9. Immediately after mixing, pour Sika® Icosit® KC 330/10 between the baseplate and substrate using only the gap provided for pouring. Ensure a continuous grout flow from one side to the other to avoid air trapping; continue to pour until grout appears at the

gap on the opposite side.

10. After approximately 4 hours, the formwork can be removed.

Green and wet concrete:

Freshly applied Sikadur®-32 + with theoretical consumption: ~0.60 kg/m² should be broadcasted with quartz sand, granulometry: 0.2 up to 0.8 mm, theoretical consumption: 2 kg/m².

1) Concrete substrates: 'green', matt-damp concrete surface, after at least the first day of maturation, and on a minimum 14 days old concrete.

Substrate must be solid, rough and clean: the concrete surface should be free from loose particles, dust, cement laitance, oil stains, grease and any other contaminants that may impair adhesion.

a) Green substrate: a matt-damp concrete surface, without a shiny layer of water on the surface (may be locally dry or matt-damp, with light and dark spots); should meet the following requirements, after at least the 1st day of maturing: the designed concrete class according to EN 206 + A1: 2016-12 should be at least C30/37; the water:cement ratio of the designed concrete should be w:c= 0.50; the surface of fresh concrete should be 'brushed' about 6 to 8 hours after mixing the concrete mixture with the use of stiff brushes in order to remove the cement laitance surface.

b) Mature concrete substrate (minimum 14 days old): substrate strength tested using the 'pull-off' (to EN 1542) method should be at least 1.5 MPa; concrete with no visible traces of moisture and no darkening caused by moisture. The concrete substrates must be prepared mechanically using suitable abrasive blast cleaning or planing / scarifying equipment to remove cement laitance and achieve an open textured gripping surface. High spots can be removed by grinding.

2) Steel substrates must be prepared mechanically using suitable abrasive blast cleaning to remove all corrosion products and achieve a bright metal finish. All dust, loose and friable material must be completely removed from all surfaces before application of the product and associated system products, preferably by vacuum extraction equipment.

Waiting time / overcoating: minimum 24 hours, maximum 7 days.

CLEANING OF TOOLS

Mixing and application tools must be cleaned at regular intervals and immediately after use with Sika® Thinner C. Hardened material can only be removed mechanically.

LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
