

# Sika® Margel VPI 580 - Capsule position for walls

4.5 metres x 3.0 metres depth 250 mm = 13.5 square metres x2 (per m<sup>2</sup>) = 27 capsules recommended (min)

The above example is a recommendation of cartridge placement for a wall of 4.5metres by 3.0 metres. The important factor is to ensure even spacing through out and minimum dosage rate of 2 capsules per m<sup>2</sup> of surface area. For concrete depth over 500mm where corrosion protection is required, it is recommended to increase the dosage rate to 2 capsules per hole and staggering the insertion depth.
