PRODUCT DATA SHEET

Parex 100 Newton Grout

Ultra-High Strength Cementitious Grout

DESCRIPTION

Parex 100 Newton Grout is a one-part, ultra-high strength cementitious grout. The mix design includes special shrinkage compensating components, which give a non-shrink grout in both the plastic and hardened states. Powerful plasticising agents produce a highly flowing grout at low water content.

USES

- Ultra-high strength grout and support systems for:
 - Stanchion bases.
 - Securing base plates.
 - Vibrating machinery bed plates.
 - Precast concrete units.
- Ground anchors.
- Fixing anchors, dowels, bars, rods, etc.
- Bridge bearing seats.
- Support of tanks, silos, etc.
- Applications requiring precision alignment.

FEATURES

- Easy to use.
- One-component just add water.
- Ultra-high strength.
- Shrinkage compensated.
- Very high strength gain after 24 hours.
- Low water content.
- Good freeze thaw stability.
- Resistant to sea water.
- Can be safely used in contact with steel.

CERTIFICATES AND TEST REPORTS

Parex 100 Newton Grout has been tested in accordance with the appropriate parts of the following standards:

- EN 12390, EN 196 and EN 1015.
- CRD C621: Corps of Engineers Specification for Non-Shrink Grout.

PRODUCT INFORMATION

Composition	Cements, high quality aggregates and synergistic admixtures.
Packaging	25 kg bags and 1000 kg bulk bags
Shelf life	6 Months
Storage conditions	Store properly in dry conditions in undamaged and unopened original sealed packaging
Appearance and colour	Cement Grey
Maximum grain size	D _{max} : 1.0 mm
Density	~2200 kg/m³

Mixing ratio	Water : mortar powder = 1 : 5.55 parts by weight (4.5 litres of water per 25kg bag, or 180 litres per one tonne bag).
Consumption	Depends on the substrate roughness and thickness of layer applied. As a guide, one 25kg bag yields approximately 12.5 litres of mortar.
Yield	1.0kg of Parex 100 Newton Grout will yield approximately 0.5 litres of mixed grout at the recommended water addition.

 Product Data Sheet

 Parex 100 Newton Grout

 August 2023, Version 02.01

BUILDING TRUST

	1 tonne of Parex 100 Newton Grout will yield approximately 0.52 m ³ of mixed grout at the recommended water addition. The yield per 25kg of Parex 100 Newton Grout is approximately 12.5 litres.
Layer thickness	10 mm minimum / 100 mm maximum
Ambient air temperature	5°C minimum / 35°C maximum
Substrate temperature	5°C minimum / 35°C maximum
Pot Life	Up to 60 minutes if kept mobile after mixing.
Setting time	~300 minutes at 20°C
Initial set time	~220 minutes at 20ºC

BASIS OF PRODUCT DATA

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

IMPORTANT CONSIDERATIONS

- Do not exceed water addition.
- Not to be used for concrete repair works.
- Do not use vibrating pokers.
- Use only on clean, sound substrate.
- Avoid application in direct sun and / or strong wind.
- Pour or pump from one side only.
- Keep exposed surfaces to a minimum.
- Do not add additional water during the surface finishing, as this will cause discoloration and / or cracking.
- Protect freshly applied material from freeze-thaw action.
- To avoid cracking in warm temperatures, keep bags cool and use cold water.

ECOLOGY, HEALTH AND SAFETY

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Safety Data Sheet (SDS) containing physical, ecological, toxicological and other safety-related data.

APPLICATION INSTRUCTIONS

SUBSTRATE QUALITY / PRE-TREATMENT

Concrete, mortar, stone:

Surfaces must be sound, thoroughly clean, free from ice, oils, grease, standing water and any loose or friable particles, and any other surface contaminants. **Steel, iron:**

Clean, free from oil or grease, rust and scale, etc. Shutter / Formwork:

Where formwork is to be used, all formwork should be of adequate strength, treated with release agent and sealed to prevent leakage. Sealing can be achieved by using Sikaflex*-11FC+ sealant beneath or around formwork, and between joints. Ensure formwork includes outlets for extraction of the pre-soaking water. A header box / hopper should be constructed on one

side of the formwork so that a grout head of 150 to 200 mm can be maintained during the grouting operation.

MIXING

Pour the required quantity of clean water (4.5 litres per 25 kg bag, or 180 litres per one tonne) into the mixing vessel for each complete unit of Parex 100 Newton Grout to be used. Slowly add the powder to the water whilst continually mixing. Mechanical mixing should be carried out using either a high torque slow speed drill with a grout stirrer, or a grout mixer set on slow speed for small mixes. For larger mixes, use forced action type mixers (high speed or colloidal mixing may cause thixotropy leading to loss of flow). This material is not suitable for mixing by hand. It is of upmost importance that the product is mixed thoroughly enough that a grout consistency is obtained without the addition of further water (at least 3 minutes). Fresh grout should be allowed to stand until the air entrapped by mixing has been released.

APPLICATION

Grout should be placed within 10 minutes of mixing, or 60 minutes if kept mobile prior to placing. Continuous placing is important, pouring or pumping from one side of the form until the grout appears at the opposite side of the grouting area. Do not disturb once grouting has been completed. Parex 100 Newton Grout may be placed at temperatures between 5°C and 35°C.

For placing at temperatures outside this range, contact Sika[®] Technical Services Department for advice.

CURING TREATMENT

After the grout has initially hardened, remove formwork and trim edges while concrete is 'green'. Protect the fresh material from premature drying using an approved curing method (e.g. curing compound such as Sikafloor[®] ProSeal, moist geo-textile membrane, hessian, polythene sheet, etc.). In cold weather, apply heat blankets to maintain a constant temperature.

Placed grout, which is exposed, should be cured in accordance with good concrete practice.

BUILDING TRUST

CLEANING OF EQUIPMENT

Clean all tools and application equipment with water immediately after use. Hardened / cured material can only be mechanically removed.

LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the declared data for this product may vary from country to country. Please consult the local Product Data Sheet for the exact product data.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
