EXTEND YOUR CREATIVITY on the floor with different application tools and Sika® ComfortFloor® Marble FX system.

Sika® ComfortFloor® Marble FX SYSTEM

CREATIVITY
Sika® ComfortFloor® Marble FX is the latest PU coating system from the Sika® ComfortFloor® range. Through a newly developed colouring method of the base material Sikafloor®-3000 FX, it is possible to create various structures and patterns during installation. Depending on the tool used, fine structures or marble-like patterns can be created. The professional applicator is able to design tailor-made floors for your object in a variety of basic colours. In addition, Sika® ComfortFloor® Marble FX meets the highest standards of underfoot comfort as well as abrasion resistance and resistance to mechanical damage.

SUSTAINABILITY
In the development process we made sure that the system meets the strictest emission requirements of various green labels in order to protect the applicator and later on, the users of the buildings, in terms of ecology, health and safety.

MATT LOOKING FLOOR SURFACE
Part of the Sika® ComfortFloor® Marble FX is the new Sikafloor®-306 W top coat, which gives the floor surface a matt look and makes the seamless coating system easy to clean.

Sikafloor®-3000 FX – THE BASE COAT OF Sika® ComfortFloor® Marble FX SYSTEM

Sikafloor®-3000 FX is the result of the latest sealer development and an extension of the Sika® ComfortFloor® range. Its appearance is more matt than existing sealers, which results in an extra elegant looking surface and makes Sika® ComfortFloor® Marble FX outstanding. Additionally it is elastic and can therefore very well withstand point loads.

Layer | Product
--- | ---
1. Primer | Sikafloor®-150/-151
2. Base coat | Sikafloor®-3000 FX
3. Top coat | Sikafloor®-306 W

Key advantages:
- Two part, aliphatic PU
- Very low VOC and odor
- Water based
- Easy to apply
- Good UV and yellowing resistance
- Elastic, resistant against point loads
- Easy to clean

Inspiration from our environment and from everywhere.
THE VISUAL EFFECTS COME FROM APPLICATION

SikaFloor®-3000 FX is distributed on the surface and then reworked with different tools. Depending on the tool used, the floor gets its individual look.

Specific marble effect achieved with a trowel or with a soft and flexible blade.

If you use a special notched trowel you can create an effect which looks similar to wood.

Or just use different kind of rollers, which can create a more uniform structured pattern.
A WELL-CRAFTED COLOUR PALETTE can do wonders for an interior space.

The use of colour and graphic images can align to the existing logo and symbolic colour of the building type to achieve an overall visual aesthetic, while it can also elicit emotions and unique perceptions of space. It has an ability to calm or excite, can make a room appear smaller or more grandiose, or even trigger subconscious reactions. Colour is the most vital, impactful and expressive design element in a designer’s toolbox.

The colour examples shown on page 3 and 7 illustrate how the visual effect appears in different colour shades. For the Sika® ComfortFloor® range we supply 72 standard colours. Out of this range most colours are also available with Sikafloor®-3000 FX.

Inspiration from our environment and from everywhere.
