

CASE STUDY

HOUSE EXTENSION

HAMPSTEAD HEATH, LONDON

REQUIREMENT: To bond glass to aluminium window sashes and frames of large sliding doors, a glass corner detail and roof glazing with Sikasil® WT-480. This helped shape the large L-shaped extension to the rear of this period property to enable the owners to fully appreciate and enjoy their courtyard garden all year round.

The benefits of bonding glass include the elimination of costly call outs to fix 'catching' window sashes. Using Sikasil® window bonding adhesives can potentially reduce the sash width profile cross section. The slimmer sash allows more light into the living space and adds to the occupants 'Well Being'.

Lucy Hedges of ODC Door & Glass Systems Limited commented, "We use Sikasil® WT-480 specifically to bond our thin framed slider. It is a great product for this application as it has a quick curing time and great shelf life".
