

# **BUILDING TRUST**

# PRODUCT DATA SHEET

# Sika MonoTop®-3020

Cementitious, R3 pore filler and levelling mortar containing recycled raw materials

# PRODUCT DESCRIPTION

Sika MonoTop®-3020 is a one-part, cementitious, polymer modified, low shrinkage surfacing and finishing mortar. It contains recycled supplementary cementitious materials and can reduce the carbon footprint application activity calculations.

# **USES**

The Product is used for:

- Producing a thin layer render.
- As a concrete pore filler and levelling / smoothing mortar.
- Repairing minor concrete defects (pores and honeycombed concrete).
- Structures requiring a Class R3, R2 or R1 mortar.

# **CHARACTERISTICS / ADVANTAGES**

- Uses recycled raw materials.
- Layer thickness 1–5 mm.
- Dust reduced compared with similar materials.
- Applied up to 5 mm thick in one layer on vertical and horizontal applications.
- Good surface finishing.
- Low cracking sensitivity.
- Sulphate resistant.
- Hand and machine application (wet spray technique).
- Very good resistance to water and chloride penetration.
- Compatible with Sikagard® overcoat systems.
- Ready to mix with water.
- Does not contain chlorides or other corrosion promoting additives.
- EuroClass A1 fire rating.

- Class R3 of EN 1504-3.
- Restoration work (Principle 3, method 3,1 and 3,3 of EN 1504-9). Repair of spalling and damaged concrete in infrastructure and superstructure works.
- Preserving or restoring passivity (Principle 7, method 7,1 and 7,2 of EN 1504-9). Increasing cover with additional mortar and replacing contaminated or carbonated concrete.

# **ENVIRONMENTAL INFORMATION**

- Environmental Product Declaration (EPD) in accordance with EN 15804. EPD independently verified by Institut für Bauen und Umwelt e.V. (IBU).
- Specific Environmental Product Declaration (EPD) in accordance with EN 15804. EPD independently verified by BRE Global.

# **APPROVALS / STANDARDS**

 CE marking and declaration of performance based on EN 1504-3: Products and systems for the protection and repair of concrete structures — Structural and non-structural repair.

**Product Data Sheet Sika MonoTop®-3020**August 2023, Version 03.02
020302050010000114

# **PRODUCT INFORMATION**

Product Declaration	Complies with the general requirements of EN 1504-3: Class R3.				
Chemical Base	Sulphate resistant cement, selected aggregates, additives and polymers.				
Packaging	25 kg bag Refer to the current price list for available packaging variations.				
Shelf Life	12 months from date of production.				
Storage Conditions	The Product must be stored in original, unopened and undamaged sealed packaging in dry conditions at temperatures between +5 °C and +35 °C. Protect the Product from direct sunlight. Always refer to packaging. Refer to the current Safety Data Sheet for information on safe handling and storage.				
Appearance / Colour	Grey Powder				
Maximum Grain Size	D <sub>max</sub> : 0.4 mm				
Soluble Chloride Ion Content	≤ 0.05 % (EN 1015-1				
TECHNICAL INFORMATIC	N				
Compressive Strength	1 day 7 days	~20 MP	~8 MPa ~20 MPa		
	28 days		~40 MPa		
Flexural Strength	28 days	~6 MPa		(EN 12190	
Tensile adhesion strength	≥ 2.5 MPa			(BS EN 1542:1999	
Thermal Compatibility	≥ 1.5 MPa (Part 1 Freeze-Thaw)			(EN 13687-1	
Capillary Absorption	≤ 0.5 kg/m <sup>-2</sup> ·h <sup>-0,5</sup>	≤ 0.5 kg/m <sup>-2</sup> ·h <sup>-0,5</sup>			
Permeability to CO2	< 2000 μCO <sub>2</sub>	< 2000 μCO <sub>2</sub> (EN 1062-6			
Carbonation Resistance	dk ≤ control concret	dk ≤ control concrete MC (0,45)			
Reaction to Fire	EuroClass A1			(EN 13501-1	
SYSTEM INFORMATION					
System Structure	Layer		Product		
	Bonding primer - normal use		Sika® MonoTop®-1010		
	Bonding primer - heavy duty		SikaTop® Armatec®-110 EpoCem®		
	Repair mortar		Sika® MonoTop®-4012		
	Smoothing coat		Sika MonoTop®-3020		

# APPLICATION INFORMATION

Mixing Ratio	~4.7 litres of water for 25 kg powder.		
Fresh mortar density	~2.0 kg/l		
Consumption	~1.7 kg/m²/mm  Note: Consumption data is theoretical and does not allow for any additional material due to surface porosity, surface profile, variations in level,		

ther information.

**Product Data Sheet Sika MonoTop®-3020**August 2023, Version 03.02
020302050010000114

Note: Other primers can be used. Contact Sika® Technical Services for fur-

wastage or any other variations. Apply product to a test area to calculate

	the exact consumption for the specific substrate conditions and proposed application equipment.  25 kg of powder yields approximately 14.85 litres of mortar.				
Yield					
Layer Thickness	Application	Minimum		Maximum	
	Horizontal	1 mm		5 mm	
	Vertical	1 mm		5 mm	
	Overhead	1 mm		5 mm	
Product Temperature	Maximum		+35 °C		
	Minimum		+5 °C		
Ambient Air Temperature	Maximum		+35 °C		
	Minimum		+5 °C		
Substrate Temperature	Maximum		+35 °C		
	Minimum		+5 °C		
Pot Life	~50 minutes at +20 °C				
Open Time	~40 minutes at +20 °C				
Waiting Time / Overcoating	Minimum 24 hours at +20 °C. As a guide, depending on weather conditions, overcoat 3 days after application (2 days curing + 1 day drying) with the Sikagard® range of protective coatings. For other emulsion paints, refer to the relevant manufacturer's				

product information.

# **VALUE BASE**

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

# **FURTHER DOCUMENTS**

- Site Handbook 'Repair of Concrete Structures Patch Repair and Spray Applications'.
- 850 32 01 Method Statement: Repairing Concrete Using Sika Ready To Use Mortars.

# **ECOLOGY, HEALTH AND SAFETY**

User must read the most recent corresponding Safety Data Sheets (SDS) before using any products. The SDS provides information and advice on the safe handling, storage and disposal of chemical products and contains physical, ecological, toxicological and other safety-related data.

# **APPLICATION INSTRUCTIONS**

## **EQUIPMENT**

Select the most appropriate equipment required for the project:

SUBSTRATE PREPARATION EQUIPMENT

- Mechanical handheld tools.
- High or ultra-high pressure water blasting equipment.

#### STEEL REINFORCEMENT EQUIPMENT

Abrasive blast cleaning equipment.

• High pressure water blasting equipment.

#### MIXING EQUIPMENT

- Clean mixing containers.
- Small quantities: Low speed electric single or double paddle mixer (< 500 rpm).</li>
- Large quantities: Forced action mixer.

# APPLICATION EQUIPMENT

- Hand applied: Plasterers hawk, trowel.
- Wet Spray: All-in-one mixing and spraying machine or separate spraying machine and all associated ancillary equipment to suit application volumes.

#### FINISHING EQUIPMENT

- Trowel (PVC or wooden).
- Sponge.

Also refer to Site Handbook 'Repair of Concrete Structures – Patch Repair and Spray Applications'.

#### SUBSTRATE PREPARATION

# CONCRETE

- Clean the substrate thoroughly so it is free from dust, loose material, surface contamination and material which reduces adhesion, prevents suction or wetting by the repair materials.
- 2. Remove delaminated, weak, damaged and deteriorated concrete and where necessary, sound concrete. Remove using mechanical handheld tools, high or ultra-high-pressure water blasting equipment.
- 3. Remove sufficient concrete from around corroded reinforcement to allow cleaning, application of a corrosion protection coating (where required) and compaction of the concrete repair mortar.
- 4. Prepare repair surface areas in simple square or rectangular layouts to avoid shrinkage stress concentrations and cracking while the repair material cures. This can also avoid structural stress concentrations

**Sika MonoTop®-3020**August 2023, Version 03.02
020302050010000114

from thermal movement and loading during the service life

#### STEEL REINFORCEMENT

- Remove rust, scale, mortar, concrete, dust and other loose and deleterious material which reduces bond or contributes to corrosion.
- 2. Prepare surfaces to bright steel, Sa 2 (ISO 8501-1), using abrasive blast cleaning or high-pressure water blasting equipment.

#### **MIXING**

- Pour the minimum amount of water into a suitable clean mixing container or equipment.
- Gradually add the powder to the water while stirring slowly.
- 3. Mix thoroughly for at least for 3 minutes, add additional water if necessary.
  - Note: Do not add more water than the maximum specified amount.
- 4. Adjust to the required consistency to achieve a smooth consistent mix.
- 5. Check the consistency after every mix.

#### **APPLICATION**

#### Strictly follow installation procedures

Strictly follow installation procedures as defined in Method Statements, application manuals and working instructions which must always be adjusted to the actual site conditions.

#### Protect from frost

Protect freshly applied material from freezing and frost to prevent cracking.

#### Application in the direct sun or strong winds

Avoid application in direct sun, strong winds or both to reduce the risk of the Product cracking.

REINFORCEMENT CORROSION PROTECTION COATING

 Where a reinforcement coating is required, apply to the whole exposed circumference Sika® MonoTop®-1010 or SikaTop® Armatec®-110 EpoCem® (refer to individual Product Data Sheets).

#### **BONDING PRIMER**

When a bonding primer is required to achieve the required adhesion values, use Sika® MonoTop®-1010 or SikaTop® Armatec®-110 EpoCem® (refer to individual Product Data Sheets).

Note: On a well prepared and roughened substrate or for a sprayed application, a bonding primer is generally not required.

REPAIR MORTAR MANUAL APPLICATION

#### Substrate pre-wetting

Insufficient substrate saturation prior to application will cause the mortar to not gain full mechanical properties.

- 1. Only apply the Product to stable, prepared substrates
- 2. Thoroughly pre-wet the prepared substrate for a minimum of 2 hours before application.
- 3. Keep the surface wet and do not allow to dry.
- 4. The final pre-wetted surface must achieve a dark matt appearance (saturated surface dry).

# Sagging or slumping of built up layers

Allow each layer to slightly harden and remain wet before applying subsequent layers.

1. Remove excess water from within the surface pores

- and cavities with a clean sponge.
- Make a scratch coat using the repair mortar.
   Apply the scratch coat over the complete subs
- Apply the scratch coat over the complete substrate surface to form a thin layer to fill surface pores or cavities.
- 4. IMPORTANT: Do not apply as a 'feather edge'. Apply the repair mortar onto the scratch coat 'wet on wet' between the minimum and maximum layer thicknesses without the formation of voids.

# REPAIR MORTAR SPRAYED APPLICATION - WET SPRAY Substrate pre-wetting

Insufficient substrate saturation prior to application will cause the mortar to not gain full mechanical properties.

- Only apply the Product to stable, prepared substrates.
- 2. Thoroughly pre-wet the prepared substrate for a minimum of 2 hours before application.
- 3. Keep the surface wet and do not allow to dry.
- 4. The final pre-wetted surface must achieve a dark matt appearance (saturated surface dry).

#### Sagging or slumping of built up layers

Allow each layer to slightly harden and remain wet before applying subsequent layers.

- 1. Remove excess water from within the surface pores and cavities with a clean sponge.
- 2. Place the wet mixed repair mortar into the spraying equipment.
- 3. Spray the repair mortar onto the pre-wetted substrate between the minimum and maximum layer thicknesses without the formation of voids.

SURFACE FINISHING

#### Adding water during surface finishing

Do not add water during the surface finishing as this can cause discolouration and / or cracking.

- 1. Allow mortar to surface harden.
- 2. Surface finish to the required surface texture using a stainless steel, steel, PVC or wooden float.

#### **CURING TREATMENT**

- Protect fresh mortar immediately from premature drying using an appropriate curing method, such as curing compound, moist geotextile membrane or polythene sheet.
- Curing compounds must not be used when they could adversely affect subsequently applied products and systems.

#### **CLEANING OF TOOLS**

Clean all tools and application equipment with water immediately after use. Hardened material can only be removed mechanically.

# LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

# **LEGAL NOTES**

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
