BRITVIC – NEW BOTTLING LINE

Background

Founded in the 1930s The British Vitamin Products Company used soft drinks to bring an affordable source of vitamins to the nation. Britvic is the largest supplier of branded still soft drinks in Great Britain – and the number two supplier of branded carbonated soft drinks – operating across eight major sites and employing almost 2,000 people. The company's regional facilities have been located at the Beckton site since 1972, which is primarily used for the production and packaging of soft drinks.

Project Description

As part of a project to expand production a new bottling line had to be installed which needed to conform to the strict hygiene guidelines within the industry. In order to meet the tight project programme, the floor finish needed to be laid onto early age concrete. Soft drinks are well known to have several components that can be aggressive to flooring finishes, particularly sugars and citric acid. The cumulative effect of these chemicals can quickly shorten the life cycle of normal flooring materials. It had to be low maintenance and easy to clean with a UV stable topcoat.

Our Solution

Sika® Ucrete® DP10 with a light stable, fast curing Sikafloor® TC 681. An added benefit was Sika® Ucrete® DP10 could be applied to seven-day old concrete. The Sika® Ucrete® solution allowed for the required hygiene, chemical, impact and slip resistance imperatives to be met, in addition to providing a UV light stable aesthetic installation finish for the 2000m² installation.

Projects facts at a glance

- Fast installation
- Chemically resistant
- Slip resistant
- Extremely durable
- Low maintenance
