PRODUCT DATA SHEET
Sikadur®-41 CF Rapid

3-COMPONENT THIXOTROPIC EPOXY PATCHING MORTAR

PRODUCT DESCRIPTION
Sikadur®-41 CF Rapid is a moisture tolerant, thixotropic, structural 2-component adhesive and repair mortar, based on a combination of epoxy resins and special fillers, designed for use at temperatures between +5 °C and +20 °C.

USES
As a repair and bonding mortar for:
• Concrete elements
• Hard natural stone
• Ceramics, fiber cement
• Mortar, Bricks, Masonry
• Steel, Iron, Aluminium
• Wood
• Polyester, Epoxy
• Glass
As a repair mortar:
• Filling of cavities and voids
• Vertical and overhead use
• Corners and edges
As an abrasion and impact resistant wearing course:
• Joint filling and crack sealing
• Joint and crack arris / edge repair

CHARACTERISTICS / ADVANTAGES
Sikadur®-41 CF Rapid has the following advantages:
• Easy to mix and apply
• Very good adhesion to most construction materials
• High strength adhesive
• Thixotropic: non-sag in vertical and overhead applications
• Hardens without shrinkage
• Different coloured components (for mixing control)
• No primer needed
• High initial and ultimate mechanical strength
• Good abrasion resistance
• Impermeable to liquids and water vapour
• Good chemical resistance

APPROVALS / STANDARDS
Mortar for structural and non-structural repair, tested according to EN 1504-3, provided with the CE-mark

Product Data Sheet
Sikadur®-41 CF Rapid
May 2017, Version 01.01
020204030010000044
Storage Conditions
Store in original, unopened, sealed and undamaged packaging in dry conditions at temperatures between +5 °C and +30 °C. Protect from direct sunlight.

Density
2.01 ± 0.1 kg/l (component A+B+C mixed) (at +21 °C)

APPLICATION INFORMATION

Mixing Ratio
Component A : B : C = 2 : 1 : 2.5 by weight
Component A : B : C = 2 : 1 : 3.4 by volume

Consumption
The consumption of Sikadur®-41 CF Rapid is ~ 2.0 kg/m² per mm of thickness.

Layer Thickness
60 mm max per layer. Multiple layers can be used to achieve required final thickness. Wait for each previous layer to harden & cool before applying next layer.

Sag Flow
On vertical surfaces it is non-sag up to 20 mm thickness. (EN 1799)
**Product Temperature**

Sikadur®-41 CF Rapid must be applied at temperatures between +5 °C and +20 °C.

**Ambient Air Temperature**

+5 °C min. / +20 °C max.

**Dew Point**

Beware of condensation. Substrate temperature during application must be at least 3 °C above dew point.

**Substrate Temperature**

+5 °C min. / +20 °C max.

**Substrate Moisture Content**

Substrate must be dry or mat damp (no standing water) Brush the adhesive well into the substrate

**Pot Life**

<tr>
<td>+30 °C</td>
<td>~ 40 minutes</td>
<td>~ 45 minutes</td>
</tr>
</tbody>
</table>

(EN ISO 9514)

*200 g

The potlife begins when the resin and hardener are mixed. It is shorter at high temperatures and longer at low temperatures. The greater the quantity mixed, the shorter the potlife. To obtain longer workability at high temperatures, the mixed adhesive may be divided into portions. Another method is to chill components A+B and C before mixing them (not below +5 °C).

**APPLICATION INSTRUCTIONS**

**SUBSTRATE QUALITY**

Mortar and concrete must be older than 28 days (depends on minimal requirement of strengths).

Verify the substrate strength (concrete, masonry, natural stone).

The substrate surface (all types) must be clean, dry or mat damp (no standing water) and free from contaminants such as dirt, oil, grease, existing surface treatments and coatings etc.

Steel substrates must be de-rusted similar to Sa 2.5. The substrate must be sound and all loose particles must be removed.

**SUBSTRATE PREPARATION**

Concrete, mortar, stone, bricks:

Substrates must be sound, dry or mat damp (no standing water), clean and free from laitance, ice, grease, oils, old surface treatments or coatings and all loose or friable particles must be removed to achieve a laitance and contaminant free, open textured surface.

Steel:

Must be cleaned and prepared thoroughly to an acceptable quality i.e. by blast-cleaning and vacuum. Avoid dew point conditions.

**MIXING**

Pre-batched units:

Mix components A+B together for at least 3 minutes with a mixing spindle attached to a slow speed electric drill (max. 300 rpm) until the material becomes smooth in consistency and a uniform colour. Then add component C and continue until mixture is homogeneous. Avoid aeration while mixing. The, pour the whole mix into a clean container and stir again for ~ 1 more minute at low speed to keep air entrainment at a minimum. Mix only that quantity which can be used within its potlife.

**APPLICATION METHOD / TOOLS**

Brush the adhesive well into the substrate. Sikadur®-31 CF can be used as primer to improve the bond.

When using a thin layer adhesive, apply the mixed adhesive to the prepared surface with a spatula, trowel, notched trowel, (or with hands protected by gloves). When applying as a repair mortar use some formwork. When using for bonding metal profiles onto vertical surfaces, support and press uniformly using props for at least 12 hours, depending on the thickness applied (not more than 5 mm) and the room temperature. Once hardened check the adhesion by tapping with a hammer.

**CLEANING OF TOOLS**

Clean all tools and application equipment with Sika® Thinner C immediately after use. Hardened / cured material can only be mechanically removed.

**LIMITATIONS**

Sikadur® resins are formulated to have low creep under permanent loading. However due to the creep behaviour of all polymer materials under load, the long term structural design load must account for creep. Generally the long term structural design load must be lower than 20–25 % of the failure load.

**VALUE BASE**

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

**LOCAL RESTRICTIONS**

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

**ECOLOGY, HEALTH AND SAFETY**
For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Safety Data Sheet (SDS) containing physical, ecological, toxicological and other safety-related data.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika’s current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika’s recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product’s suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
