SIKA CREATES WATERTIGHT TERRACE AT BLACKPOOL

BEACH BAR Over 200m² of a Sika fast curing flooring solution has been specified to create an impact resistant, durable and waterproof finish at the £3million regeneration of the Walkabout Bar in Blackpool – helping the venue to reopen just four months after it was destroyed by fire.

During the refurbishment, the three-storey building was reconfigured to include new bars, improved facilities and a stunning outdoor terrace overlooking the town. Appointed to install an external waterproofing system which would provide flexibility, watertightness and resistance to footfall, specialist contractor Mike Thelwell Flooring turned to the product performance, technical knowledge and practical expertise of Sika.

WALKABOUT BAR BLACKPOOL

To create the hard-wearing floor, a three component Sikafloor® Pronto system – comprising primer, levelling mortar and a fast curing top coat – was applied within just 5 working days. In addition to exceptional waterproofing abilities, the self-smoothing screed and levelling mortar was scattered with quartz sand to resemble a sandy beach whilst maintaining the watertight and slip resistant surface.

Laid to falls to five drain outlets, these were waterproofed individually by dressing Sikalastic® Fleece 120 into the openings and encapsulating the fleece into the resin system to maintain a seamless transition. The perimeter upstands were also waterproofed by forming the system to a height of 150mm up the walls.

With more than forty years' experience in the flooring industry, Sika has a range of high performance resin floor systems which are suitable for the most demanding environments. Offering outstanding on-site support and an unrivalled range of products, Sika offers systems which are ideal for virtually all new build and refurbishment projects.

Designed to fulfil an almost endless combination of functional and aesthetic requirements, Sikafloor® systems provide a flexible and tough solution. With thousands of customers visiting the bar every week, the tried and tested Sikafloor system will ensure the stunning new balcony is durable, waterproof and resistant for many years to come.
