SARNAFIL HD, THE ROBUST SINGLE PLY MEMBRANE

PUNCTURE TEST DATA

BS EN 12691:2006 - Bitumen, plastic and rubber sheets for roof waterproofing.

Always looking to provide our customers with products that meet, and exceed, the demands of the market, we have launched the Sarnafil HD concept, which promotes the use of thicker and more robust membranes. Sarnafil HD is the membrane particularly suited to tough conditions.

Sarnafil HD is a 2mm thick membrane that will help withstand the rigours of the modern construction site. In puncture testing, 2mm membrane out-performs thinner membranes every time.

Furthermore, the use of SarnaTherm HD insulation board, with its high compressive strength helps to resist damage from foot traffic and heavy loads.

To speak to an expert about the individual membrane test results or our range of flat roofing solutions such as SarnafilHD, please visit our website:
