Agrément Certificate
21/5942
Product Sheet 2

SIKA LIQUID-APPLIED WATERPROOFING SYSTEMS

SIKALASTIC -800 HA LIQUID-APPLIED PROTECTED ROOF WATERPROOFING SYSTEM

This Agrément Certificate Product Sheet[1] relates to the Sikalastic[2] -800 HA Liquid Applied Protected Roof Waterproofing System, a two-component, self-levelling, polyurea waterproofing membrane, for use in protected flat roof specifications, including those with zero falls.

(1) Hereinafter referred to as 'Certificate'.
(2) Sikalastic is a registered trademark.

CERTIFICATION INCLUDES:

- factors relating to compliance with Building Regulations where applicable
- factors relating to additional non-regulatory information where applicable
- independently verified technical specification
- assessment criteria and technical investigations
- design considerations
- installation guidance
- regular surveillance of production
- formal three-yearly review.

KEY FACTORS ASSESSED

Weathertightness — the system will resist the passage of moisture into the interior of a building (see section 6).
Properties in relation to fire — roofs incorporating the system may be restricted under the national Building Regulations (see section 7).
Adhesion — the system will resist the effects of any likely wind suction acting on the roof (see section 8).
Resistance to mechanical damage — the system will accept, without damage, the foot traffic and loads associated with installation and maintenance (see section 9).
Durability — under normal service conditions, the system will provide a durable roof waterproofing with a service life in excess of 25 years (see section 11).

The BBA has awarded this Certificate to the company named above for the system described herein. This system has been assessed by the BBA as being fit for its intended use provided it is installed, used and maintained as set out in this Certificate.

On behalf of the British Board of Agrément

Date of First issue: 4 November 2021

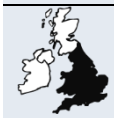
Regulations

In the opinion of the BBA, the Sikalastic -800 HA Liquid Applied Protected Roof Waterproofing System, if installed, used and maintained in accordance with this Certificate, can satisfy or contribute to satisfying the relevant requirements of the following Building Regulations (the presence of a UK map indicates that the subject is related to the Building Regulations in the region or regions of the UK depicted):



The Building Regulations 2010 (England and Wales) (as amended)

Requirement:	**B4(2)**	**External fire spread**
Comment:		Roofs incorporating the system, when used with suitable surface protection, may be unrestricted under this Requirement. See section 7 of this Certificate.
Requirement:	**C2(b)**	**Resistance to moisture**
Comment:		The system will enable a roof to satisfy this Requirement. See section 6 of this Certificate.
Regulation:	**7(1)**	**Materials and workmanship**
Comment:		The system is acceptable. See section 11 and the *Installation* part of this Certificate.

The Building (Scotland) Regulations 2004 (as amended)

Regulation:	**8(1)**	**Durability, workmanship and fitness of materials**
Comment:		The system comprises acceptable materials and satisfies the requirements of this Regulation. See sections 11 and the *Installation* part of this Certificate.
Regulation:	**9**	**Building standards applicable to construction**
Standard:	2.8	Spread from neighbouring buildings
Comment:		Roofs incorporating the system, when used with suitable surface protection, may enable a roof to be unrestricted under this Standard, with reference to clause 2.8.1(1)(2). See section 7 of this Certificate.
Standard:	3.10	Precipitation
Comment:		The system will enable a roof to satisfy the requirements of this Standard, with reference to clauses 3.10.1(1)(2) and 3.10.7(1)(2). See section 6 of this Certificate.
Standard:	7.1(a)	Statement of sustainability
Comment:		The system can contribute to satisfying the relevant requirements of Regulation 9, Standards 1 to 6, and therefore will contribute to a construction meeting a bronze level of sustainability as defined in this Standard.
Regulation:	**12**	**Building standards applicable to conversions**
Comment:		Comments in relation to the system under Regulation 9, Standards 1 to 6, also apply to this Regulation, with reference to clause 0.12.1(1)(2) and Schedule 6(1)(2).

(1) Technical Handbook (Domestic).
(2) Technical Handbook (Non-Domestic).

The Building Regulations (Northern Ireland) 2012 (as amended)

Regulation:	**23(a)**	**Fitness of materials and workmanship**
Comment:	**(b)(i)**	The system is acceptable. See section 11 and the *Installation* part of this Certificate.
Regulation:	**28(b)**	**Resistance to moisture and weather**
Comment:		The system will enable a roof to satisfy the requirements of this Regulation. See section 6 of this Certificate.

Regulation:	**36(b)**	**External fire spread**
Comment:		Roofs incorporating the system, when used with suitable surface protection, may be unrestricted under the requirements of this Regulation. See section 7 of this Certificate.

Construction (Design and Management) Regulations 2015
Construction (Design and Management) Regulations (Northern Ireland) 2016

Information in this Certificate may assist the client, designer (including Principal Designer) and contractor (including Principal Contractor) to address their obligations under these Regulations.

See sections: 3 *Delivery and site handling* (3.2 to 3.4) of this Certificate.

Additional Information

NHBC Standards 2021

In the opinion of the BBA, the Sikalastic -800 HA Liquid Applied Protected Roof Waterproofing System, if installed, used and maintained in accordance with this Certificate, can satisfy or contribute to satisfying the relevant requirements in relation to *NHBC Standards*, Chapter 7.1 *Flat roofs, Terraces and balconies*.

In addition, in the opinion of the BBA, the system when installed and used in accordance with this Certificate can satisfy or contribute to satisfying the relevant requirements in relation to *NHBC Standards for Conversions and Renovations*, taking account of other relevant guidance within the chapter and the suitability of the substrate to receive the system.

The NHBC Standards do not cover the use of the products in the refurbishment of existing roofs.

Technical Specification

1 Description

1.1 The Sikalastic -800 HA Liquid Applied Protected Roof Waterproofing System is a two-component, self-levelling, solvent-free, polyurea-based waterproofing membrane.

1.2 The system comprises the following components:

- Sikalastic -800 HA – a two-component, low odour, hand-applied polyurea-based waterproofing membrane
- Sikalastic Primer -01 – a two-component primer for use on cementitious substrates prior to the application of Sikalastic -800 HA
- Sika Concrete Primer — a two-part, rapid curing polyurea based primer for use on cementitious substrates prior to application of Sikalastic 800HA for use at air and substrate temperatures between 5 and 30°C
- Sikafloor 151 — a two-part epoxy primer for use on cementitious substrates prior to the application of Sikalastic 800HA for use at air and substrate temperatures between 10 and 30°C
- Sikalastic -701 – a two-component UV-resistant top coat for use over Sikalastic -800HA in areas that may be exposed to UV radiation.

1.3 Other products[(1)] which may be used with the system, but which are outside the scope of this Certificate, include:

- specialist primers
- extenders/thixotropy additives
- waterstops
- specialist sealants
- drainage boards
- protection boards
- concrete repair systems

- cleaning solvents and biowashes.

(1) Details of suitable products may be obtained from the Certificate holder.

2 Manufacture

2.1 The system components are manufactured by batch blending processes.

2.2 As part of the assessment and ongoing surveillance of product quality, the BBA has:

- agreed with the manufacturer the quality control procedures and product testing to be undertaken
- assessed and agreed the quality control operated over batches of incoming materials
- monitored the production process and verified that it is in accordance with the documented process
- evaluated the process for management of nonconformities
- checked that equipment has been properly tested and calibrated
- undertaken to carry out the above measures on a regular basis through a surveillance process, to verify that the specifications and quality control operated by the manufacturer are being maintained.

2.3 The management systems of the manufacturers have been assessed and registered as meeting the requirements of BS EN ISO 9001 : 2015 by SGS (Certificate CH18/1439.00).

3 Delivery and site handling

3.1 The components are delivered to site in sealed containers, with each component packed separately in the specified mix proportions. Each pack is labelled with the Certificate holder's name, product name, component identification, batch number, date of manufacture/expiry date and health and safety information.

3.2 The system components are available in the pack weights given in Table 1.

Table 1 Pack weights and storage life

Component	Packaging type	Pack weight (kg)	Shelf life (months)
Sikalastic -800 HA Part A + B (composite pack)	Metal drums	25	12
Sikalastic Primer -01 Part A + B (composite pack)	Metal cans	4.73 and 12.08	12
Sika Concrete Primer Part A + B (Composite packs)	Metal cans	11.5	12
Sikafloor -151 Part A + B (Composite packs)	Metal cans	30	24
Part A Part B	Drums Drums	255 180	
Sikalastic -701 Part A + B (composite pack)	Metal cans	12.5	12

3.3 The system components should be stored in cool, dry conditions in unopened sealed containers away from chemicals and sources of ignition. When stored in accordance with the Certificate holder's instructions, the components will have the shelf lives detailed in Table 1.

3.4 The Certificate holder has taken the responsibility of classifying and labelling the system components under the *CLP Regulation (EC) No 1272 / 2008* on the *classification, labelling and packaging of substances and mixtures.* Users must refer to the relevant Safety Data Sheet(s).

Assessment and Technical Investigations

The following is a summary of the assessment and technical investigations carried out on the Sikalastic -800 HA Liquid Applied Protected Roof Waterproofing System.

Design Considerations

4 General

4.1 The Sikalastic -800 HA Liquid Applied Protected Roof Waterproofing System is satisfactory for use as a fully adhered waterproofing layer on new and existing flat (including those with zero fall) protected roof specifications, eg podium decks with limited access. The system has not been assessed for use in unprotected exposed specifications.

4.2 The system has been assessed for use on concrete primed with Sikalastic Primer-01.

4.3 Decks to which the system is to be applied must comply with the relevant requirements of BS 6229 : 2018 and BS 8217 : 2005 and, where appropriate, *NHBC Standards* 2021, Chapter 7.1.

4.4 Limited access roofs are defined for the purpose of this Certificate as those subjected only to pedestrian traffic for maintenance of the roof covering, cleaning of gutters, etc. Where traffic in excess of this is envisaged, additional protection to the system must be provided as specified by the Certificate holder.

4.5 Flat roofs are defined for the purpose of this Certificate as those having a minimum finished fall of 1:80.

4.6 Zero fall roofs are defined for the purpose of this Certificate as those having a finished fall which can vary between 0 and 0.7°. Reference should also be made to the appropriate clauses in Liquid Roofing and Waterproofing Association (LRWA) Note 7 – *Specifier Guidance for Flat Roof Falls*.

4.7 For design purposes, twice the minimum finished fall should be assumed, unless a detailed analysis of the roof is available, including overall and local deflection, direction of falls, etc.

4.8 The drainage systems for inverted roofs and zero fall roofs in particular must be correctly designed, and the following points should be addressed:

- provision made for access for maintenance purposes
- for zero fall roofs, it is particularly important to identify the correct drainage points to ensure that drainage is sufficient and effective
- additional guidance for inverted roof specifications is given in *BBA Information Bulletin No 4 Inverted roofs – Drainage and U value corrections*.

4.9 Structural decks to which the system is to be applied must be suitable to transmit the dead and imposed loads experienced in service. Imposed loads, dead loading and wind loads must be calculated by a suitably experienced and competent individual in accordance with BS EN 1991-1-1 : 2002, BS EN 1991-1-3 : 2003 and BS EN 1991-1-4 : 2005, and their UK National Annexes.

4.10 Insulation materials to be used in conjunction with the system must be in accordance with the Certificate holder's instructions and must be either:

- as described in the relevant clauses of BS 6229 : 2018, or
- the subject of a current BBA Certificate and used in accordance with, and within the limitations of, that Certificate.

4.11 Detailing requirements, eg at service penetrations and movement joints, must be evaluated on a case-by-case basis, and the advice of the Certificate holder must be sought for suitable specifications.

4.12 The NHBC requires that the waterproofing membranes, once installed, be inspected in accordance with NHBC Standards 2021, Chapter 7.1, Clause 7.1.12, which include an appropriate integrity test, where required. Any damage to the membrane is repaired in accordance with section 15 of this Certificate and reinspected.

5 Practicability of installation

The system should only be installed by installers who have been trained and approved by the Certificate holder.

6 Weathertightness

The system will adequately resist the passage of moisture into a building and will enable a roof to comply with the requirements of the national Building Regulations.

7 Properties in relation to fire

7.1 The system, including an inorganic covering listed in the Annex of Commission Decision 2000/553/EC, can enable a roof to be unrestricted under the national Building Regulations.

7.2 The designation of other specifications should be confirmed in accordance with the requirements of the documents supporting the national Building Regulations.

8 Adhesion

The adhesion of the system to primed concrete is sufficient to resist the effects of wind suction, thermal cycling or other minor structural movements likely to occur in service.

9 Resistance to mechanical damage

9.1 The system can accept, without damage, the foot traffic and light concentrated loads associated with installation and maintenance. Care should be taken to avoid puncture by sharp objects or concentrated loads.

9.2 The system achieved a result of I_4 with respect to dynamic indentation and L_2 with respect to static indentation when tested in accordance with EOTA TR006 and EOTA TR007, respectively.

9.3 The system is capable of accepting minor structural movement while remaining weathertight.

10 Maintenance

As the system is confined between the structure and backfill and has satisfactory durability (see section 9), maintenance is not required. Any damage occurring during construction works must be repaired in accordance with section 12, prior to enclosing in the structure.

11 Durability

Under normal service conditions, the system will function effectively as a roof waterproofing for a period in excess of 25 years.

Installation

12 General

12.1 Installation of the Sikalastic -800 HA Liquid Applied Protected Roof Waterproofing System must be carried out in accordance with the relevant requirements of BS 8000-0 : 2014, BS 8000-4 : 1989 and BS 6229 : 2018, the Certificate holder's instructions and this Certificate.

12.2 Concrete structures should be designed and built in accordance with BS EN 1992-1-1 : 2004 and its UK National Annex.

12.3 Substrates to which the system is to be applied must be sound, clean, free from laitance and corrosion, dry and free from ice and frost.

12.4 Surfaces must be free from sharp projections such as nail heads and concrete nibs. Power floated concrete must be shot blasted or mechanically abraded to help ensure the primer can penetrate into the surface. The Certificate holder's advice must be sought as to the suitability of the substrate to receive the system and for suitable cleaning procedures, including the use of a proprietary surface cleaner/fungicidal wash where required.

12.5 Defects such as large cracks must be repaired prior to application of the system in accordance with the Certificate holder's instructions.

12.6 A minimum curing period of 28 days is normally required before new concrete surfaces are primed. The Certificate holder must be consulted for advice if priming is to be carried out before this period. The Certificate holder's instructions must be observed with respect to maximum moisture content levels in the substrate.

12.7 The substrate temperatures must exceed the dew-point by more than 3°C during application and curing. and be between +5°C and 30°C.

12.8 Previously coated areas must be checked for integrity and adequate adhesion to the substrate. Adhesion checks must be carried out to ensure that the system is compatible with the existing surfaces. The Certificate holder must be consulted for details of suitable test methods and requirements before use. If the substrate requires preparing after bond testing, the appropriate methods (such as high pressure washing, captive shot blasting or other mechanical abrasive methods) can be used. Advice must be sought from the Certificate holder.

12.9 To assess the suitability of a substrate to receive the system, bond tests should be carried out generally in accordance with BS EN 1542 : 1999, in consultation with the Certificate holder. If bonding problems occur, advice should be sought from the Certificate holder.

12.10 The system build-up specification is detailed in Table 2.

Table 2 Sikalastic -800HA Liquid Applied Waterproofing System – build-up specification

Product	Application rate ($kg \cdot m^{-2}$)
Sikalastic Primer-01	0.15 – 0.2(1)
Sika Concrete Primer	0.35(1)
Sikafloor 151	0.35(1)
Sikalastic -800 HA waterproofing membrane	≥ 2.5(2)

(1) Typical coverage rate per coat. Actual coverage will depend on surface roughness and porosity of the concrete.
(2) To achieve a dry film thickness of ≥ 2.0 mm.

12.11 Following installation, the treated surface must be tested using a non-destructive test, eg holiday test, before the system is protected. Damaged areas must be repaired in accordance with section 14.

13 Procedure

Priming

13.1 Primers must be prepared and mixed in accordance with the Certificate holder's instructions using a suitable slow speed drill fitted with a suitable mixing paddle.

13.2 The mixed primer is applied to the prepared concrete substrate using a short-piled roller or brush.

13.3 If necessary, a second coat of primer should be applied to ensure that a continuous pore-free primer film is achieved.

13.4 The primer coat must be allowed to dry prior to overcoating with Sikalastic -800 HA waterproofing membrane, ensuring that any minimum/maximum drying times are observed in accordance with the Certificate holder's instructions.

13.5 Prior to mixing the components together, part A should be mechanically mixed until homogenous. Part A is then added to Part B and mixed for two minutes until a uniform mix is achieved. To ensure thorough mixing, the mixed product should be poured into another suitable container and mixed again to achieve a consistent mix but taking care to minimise air-entrainment.

13.6 Sikalastic -800 HA waterproofing membrane is then hand-applied using a suitable roller or squeegee to achieve a minimum dry film thickness of 2 mm.

13.7 At day joints, a 100 mm overlap of new material over clean existing membrane should be ensured.

13.8 In areas where the waterproofing membrane may be exposed to UV radiation, it must be protected with Sikalastic -701 UV resistant top coat applied in accordance with the Certificate holder's instructions.

14 Repair

14.1 Any damage to the system must be repaired as soon as possible to ensure that the integrity of the waterproofing is maintained.

14.2 Minor damage to the system can be repaired by removing loose material, by abrading the surface of the affected and surrounding area to allow an overlap of 100 mm of fresh material onto sound and well-bonded coating. The system is then reinstated to the original specification.

Technical Investigations

15 Tests

Tests were carried out and the results assessed to determine:

- water vapour transmission
- resistance to water penetration
- tensile bond strength
- resistance to static indentation
- resistance to dynamic impact
- resistance to fatigue movement
- effect of heat ageing
- effect of exposure to hot water.

16 Investigations

16.1 The manufacturing process was evaluated, including the methods adopted for quality control, and details were obtained of the quality and composition of the materials used.

16.2 Existing test data was reviewed relating to:

- water vapour permeability
- tensile strength and elongation
- resistance to fatigue movement
- characterisation by infra-red spectroscopy, viscosity and density.

17 Conditions

17.1 This Certificate:

- relates only to the product/system that is named and described on the front page
- is issued only to the company, firm, organisation or person named on the front page – no other company, firm, organisation or person may hold or claim that this Certificate has been issued to them
- is valid only within the UK
- has to be read, considered and used as a whole document – it may be misleading and will be incomplete to be selective
- is copyright of the BBA
- is subject to English Law.

17.2 Publications, documents, specifications, legislation, regulations, standards and the like referenced in this Certificate are those that were current and/or deemed relevant by the BBA at the date of issue or reissue of this Certificate.

17.3 This Certificate will remain valid for an unlimited period provided that the product/system and its manufacture and/or fabrication, including all related and relevant parts and processes thereof:

- are maintained at or above the levels which have been assessed and found to be satisfactory by the BBA
- continue to be checked as and when deemed appropriate by the BBA under arrangements that it will determine
- are reviewed by the BBA as and when it considers appropriate.

17.4 The BBA has used due skill, care and diligence in preparing this Certificate, but no warranty is provided.

17.5 In issuing this Certificate the BBA is not responsible and is excluded from any liability to any company, firm, organisation or person, for any matters arising directly or indirectly from:

- the presence or absence of any patent, intellectual property or similar rights subsisting in the product/system or any other product/system
- the right of the Certificate holder to manufacture, supply, install, maintain or market the product/system
- actual installations of the product/system, including their nature, design, methods, performance, workmanship and maintenance
- any works and constructions in which the product/system is installed, including their nature, design, methods, performance, workmanship and maintenance
- any loss or damage, including personal injury, howsoever caused by the product/system, including its manufacture, supply, installation, use, maintenance and removal
- any claims by the manufacturer relating to CE marking.

17.6 Any information relating to the manufacture, supply, installation, use, maintenance and removal of this product/system which is contained or referred to in this Certificate is the minimum required to be met when the product/system is manufactured, supplied, installed, used, maintained and removed. It does not purport in any way to restate the requirements of the Health and Safety at Work etc. Act 1974, or of any other statutory, common law or other duty which may exist at the date of issue or reissue of this Certificate; nor is conformity with such information to be taken as satisfying the requirements of the 1974 Act or of any statutory, common law or other duty of care.
