

# BASEMENT WATERPROOFING STANDARDS AND SOLUTIONS LATEST CPD SEMINAR

At Sika we are dedicated to supporting Continual Professional Development within construction.

Waterproofing systems are faced with stringent requirements regarding performance, sustainability, ease of application and total cost management. Therefore, the selection of appropriate waterproofing systems according to the needs of the client, as well as correct detailing of the solution, are key in achieving a durable watertight structure.

Sika is a full range provider for below ground waterproofing and so are able to give professional, unbiased advice on the right solution for your project.

This seminar considers the various challenges and how to overcome them.

- Current Standards - BS8102:2022 Protection of Below Ground Structures Against Water Ingress
- Waterproofing options - The range of waterproofing systems available for various applications. Getting the design right with the right system and detailing
- Selecting the correct system - Different grades - Type A, Type B or Type C of waterproofing protection
- Quality Control - Ensuring correct installation and the required result

The presentation will last approximately 40 minutes, after which the audience will be asked to submit questions.
