SIKA SARNAFIL ROOFS FOR £80M REGENERATION SCHEME

PROJECT REQUIREMENT

The £80 million regeneration scheme in the London Borough of Havering created 555 new homes, and transformed the Mardyke estate, in what was one of London's most deprived, crime-ridden areas, into an exemplar of affordable, sustainable community living in its new guise as Orchard Village.

After the original 1960s tower-blocks were demolished, modern low-rise blocks were erected, some of which featured green roofs. Cambridge Polymer Roofing (CPR) were tasked with installing these roofs, as well as the standard flat roof elements.

SIKA SARNAFIL SOLUTION

Sika Sarnafil single ply was specified for the elimination of the need for hot works, but was also chosen because the membrane lends itself to different build-ups, as well as the detailing.

CPR worked closely with the main contractor Willmott Dixon to make sure the roofs were installed to a high standard of workmanship within the tight timeframes required, while also adhering to their stringent health and safety standards. The extremely high-risk process of hot work on roofs was no longer necessary, as Sika Sarnafil single ply does not require the use of this method. The project was a success, with the completed roofs meeting the high standards of the company.

PROJECT PARTICIPANTS

Product: Sika Sarnafil Single Ply Membrane

Contractor: Cambridge Polymer Roofing (CPR)
