DRIFFIELD SCHOOL

PROJECT REQUIREMENTS

Driffield School's lower school block was first built in the 1960s and comprised a concrete-decked felt roof build up. Though it had been recovered some 20 years ago, it was un-insulated and had reached the end of its useful life, particularly suffering heat loss in winter and water ingress. East Riding of Yorkshire Council procured and part-funded the scheme to upgrade the roof coverings and insulation to bring the building in line with current regulations. Just under 1,000sq m of Sarnafil G410 15EL Light Grey membrane was installed by contractor Briggs Amasco's Hull branch.

SIKA SARNAFIL SOLUTION

As the existing roof had no insulation and falls to outlets were poor, a cut-to-falls insulation system beneath the Sarnafil membrane was installed. The council selected Sarnafil single ply for this flat roof refurbishment due to the system's ability to deal with complicated details, as well as the quality and speed of installation. In addition, the fact that no 'hot work' is required, meant that the school was able to continue to operate as usual as they were able to occupy rooms below areas of work.

These dramatic before and after pictures perfectly illustrate the benefits of refurbishing ageing flat roofs with the Sika Sarnafil single ply roofing system.

Not only is the refurbished roof keeping the school protected from the elements, but it also benefits from an independently assessed BBA-certified life expectancy, which, in the opinion of the BBA, gives a life in 'excess of' 40 years.

PROJECT PARTICIPANTS

Product: Sika Sarnafil G410 15EL Light Grey

Size: Just under 1,000m²

Contractor: Architectural Decorators Ltd.

Client: Briggs Amasco's Hull branch

Our most current General Sales Conditions shall apply.
Please consult the Data Sheet prior to any use and processing.
