

SikaMur® InjectoCream-100

WATER REPELLENT CREAM

SikaMur® InjectoCream-100 is a new water repellent cream used for the control of rising damp. It is inserted into a series of holes drilled into a mortar course of the masonry by means of a simple application gun – no special injection pump required. Once injected, SikaMur® will diffuse within the damp wall to form a water repellent barrier and block future rising damp.

Used for: Treating rising damp in almost all types of masonry walls – solid brick, cavity, random form stone and rubble infill walls, etc.

BENEFITS:

- FAST AND EASY TO INSTALL – ONE-COMPONENT, READY TO USE
- NO NEED FOR PRELIMINARY WATERTIGHT SEALING AROUND THE INJECTION HOLES
- DOES NOT REQUIRE A SPECIAL, EXPENSIVE PUMP
- NO RISK OF INCREASED EFFLORESCENCE (AS WITH SILICONATE-BASED RISING DAMP TREATMENTS)
