

WINTER ADMIXTURES

Everbuild 203 Accelerator & Frostproofers

A highly concentrated chloride free air entraining admix which is designed specifically for cold weather working, eliminating the requirement for a second frostproofing admix.

- Reduces the setting time of sand and cement based mortars, renders, screeds
- Reduces water absorption and penetration
- Improves workability and accelerates set
- Protects in subzero temperatures
- Easy to use, controlled

Everbuild 207 Zeromix

A double action frostproofers and air entraining mortar admixture for use throughout the winter period. Improves workability of mortar and increases resistance to frost in both wet and hardened state. Increased frost resistance during setting.

- Improves workability even in cold weather.
- Provides resistance to freeze/thaw cycling down to -8°C in both wet and dry mortar.
- Chloride free, can be used with steel reinforced concrete structures.
- Reduces bleeding/segregation.
- Replaces lime in mix, hence reduces possibility of lime bloom and efflorescence.

Sika® Accelerator

A liquid additive formulated to accelerate setting and hardening times of mortar, concretes, screeds and rendering to provide frost protection during the setting period. Effective even in sub-zero temperatures, and can be used in normal temperatures where a rapid set is required.

- Faster finishing times even in cold weather
- Provides frost protection down to -8°C in wet mortar
- <0.1% Chloride ion, non corrosive formula
- Optimises mould usage

Sika® Wintermix

A chloride free, winter working liquid admixture for mortars and concrete that is suitable for use with steel reinforcement, allowing them to be used even at sub-zero temperatures, allowing work to continue when temperatures would normally stop operations.

- Used for mortar and render
- Ideal for sub-zero temperatures
- Improves workability and cohesion of mortar
- Chloride free properties allow usage where embedded steel reinforcement exists.
- Non-corrosive to steel
