

SIKA AT WORK

ELMGROVE HOUSE, LONDON

SikaTack® Panel Adhesive

BUILDING TRUST

ELMGROVE HOUSE LONDON

SIKA SECRET FIX ELMGROVE HOUSE IN LONDON.

Designed by Alan Camp Architects for housing and regeneration agency LHA – Asra, the 20 storey project was delivered by Galliford Try Partnerships. The building provides usable space for both public sector and commercial organisations and aims to foster a sense of community in the area. The striking concrete structure incorporates a 12 storey tower, clad in coloured panels, on top of a 6 storey timber-clad plinth.

Specialist contractor Plastering Contractors (Stanmore) Ltd was appointed to install the extensive cladding system onto the building plinth. With the installation of fully integrated rainscreen cladding – utilising the [SikaTack® Panel System](#) – the building not only achieved the required modern aesthetic, but benefitted from improved environmental performance, achieving the Eco- Homes rating of 'Very Good'.

As well as offering a simple installation process, [SikaTack® Panel Adhesive](#) has been fully tested and accredited by the [British Board of Agrément \(BBA\)](#) and DiBT. It has also been through rigorous testing, monitored and endorsed by the Centre for Window and Cladding Technology (CWCT) and is supported with impressive wind loading and dead weight statistics.
