

Sika® PowerClean Aid

Cleaning aid for glass surfaces and removal of contamination

Technical Product Data

Base	Open pours, expanded melamine resin
Color	White
Density	9.5 kg/m ³ approx.
Application method	Ideally to be used with Sika® CleanGlass
Shelf life	36 months

Description

Sika® PowerClean Aid is a smart cleaning aid based on melamine foam that is usually used in combination with Sika® CleanGlass. It is designed to remove contamination that cannot be sufficiently taken off with standard cleaners or without scratching the surface. Already during the treatment with Sika® PowerClean Aid the cleaning effect is recognized.

Sika® PowerClean Aid is manufactured in accordance with ISO 9001 / 14001 quality assurance system and the responsible care program.

Areas of Application

Sika® PowerClean Aid is designed for the removal of contamination on Aftermarket Glass Replacement substrates, e.g. usually ceramic frits or glass.

It can also be used for the removal of label residues and other kinds of pollution.

Method of Application

Use Sika® CleanGlass or an equivalent non antistatic glass cleaner to wet the surface and detect contamination. Use Sika® PowerClean Aid and start scrubbing the bond area. Sika® PowerClean Aid is designed for single use application only.

Surfaces must be allowed to dry completely before the next step in surface preparation (e.g. application of Sika® Aktivator PRO) is performed.

This product is to be used by professional experienced technicians only. If this product is used for other applications than Aftermarket Glass Replacement, trials must be carried out prior to use.

Important Note

Compatibility with the current substrate is to be verified prior to the application. Before applying Sika® PowerClean Aid to sensitive surfaces (e.g. plastics, etc.) it is recommended to test Sika® PowerClean Aid on a small, possibly non-visible area of the base material. Before application of adhesive, the surface has to be pre-treated according to Sika's surface preparation recommendations.
