DESIGNED FOR GUN-INJECTION AND PROVIDES CONSISTENT COLOUR AND FINISH

Sika Parex Standard Mortar is a Portland cement-based mortar, suitable for pointing and repointing applications involving sound brickwork or masonry. The Historic Mortars provide the degree of flexibility needed to accommodate slight movement in older buildings without cracking or damage to the building fabric.

To assist with project design, we can supply bagged samples or pointed sample panels to allow sign off from your client. Sika's specification team are happy to support you with this.

SIKA PAREX POINTING MORTARS

Sika Parex® Historic Mortar

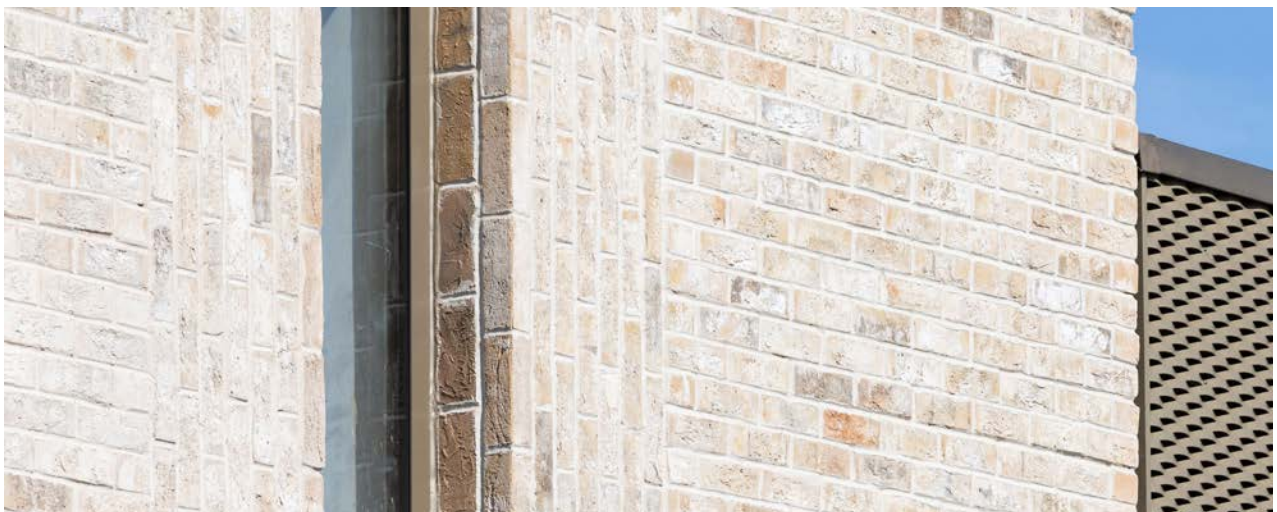

A traditional hydrated lime, sand, GGBS mortar for brickwork or stonework. Can be injected into joints as narrow as 5mm and depending on the joint width, will penetrate to a depth in excess of 100mm, allowing for the deepest of joints.

Sika Parex® Historic KL Mortar

Designed for gun-injection, Sika Parex® Historic Mortar KL is suitable for use with dense masonry and brick tiles, eg. Corium Brick Cladding System, where porosity is low and suction is limited.

Sika Parex® Standard Mortar

A brick pointing mortar that provides a clean, quick, lasting solution for pointing sound brickwork or masonry. Finished joints are highly resistant to weather and freeze-thaw action.
