ROOF BLENDS WITH HISTORIC ARCHITECTURE

PROJECT REQUIREMENT

The new Station Road student accommodation in the heart of Royal Leamington Spa is surrounded by famous regency architecture, and directly opposite the train station. An aesthetically in-keeping solution was therefore required to ensure the new building was sympathetic to its historic surroundings.

RLW Roofing was given the task to provide a modern waterproofing solution with a traditional appearance and feel, that allowed for mansards and batten profile.

SIKA SARNAFIL SOLUTION

Sika Sarnafil single ply membrane was specified for its flexibility, and ability to give the traditional lead look that was required.

RLW faced a technical and practical challenge during the installation, as within the mansard area there were 85 timber-moulded dormers, which demanded a very high level of detailing. On each, the membrane had to be fully adhered to the timber on the curved areas, in order to ensure full adhesion and continuity to all details and areas. The task was a time consuming one, but the team's product expertise, high standards of workmanship and the flexibility of the membrane ensured that the results were spectacular. RLW installed approximately 1,500sq m of Sika Sarnafil S327-15EL membrane in Lead Grey to the top of the flat roofs, with 1,200sq m of Sika Sarnafil G410-15ELF, also in Lead Grey, fully adhered to the mansards. Both areas were then covered with around 3,500sq m of batten profile at one-metre intervals.

The project was successfully completed to the client's satisfaction, on time and within the set budget. The traditional-look roof provided by Sika Sarnafil ensures that the building fits in perfectly with its surroundings, while also providing the client with a modern, high-performance solution with a life expectancy of over 40 years.

PROJECT PARTICIPANTS

Product: Sika Sarnafil S327-15EL membrane in Lead Grey and Sika Sarnafil G410-15ELF in Lead Grey

Contractor: RLW Roofing
