

# WHY CHOOSE A SIKA GREEN ROOF?

At Sika our roofing Area Technical Managers can help you to choose the right type of green roof for your project and its requirements. From initial design considerations and identifying the appropriate Sika waterproofing solution, either our single ply, bituminous or cold-applied liquid systems, your local Sika roofing expert can then support with creating a specification for a full green roof system:

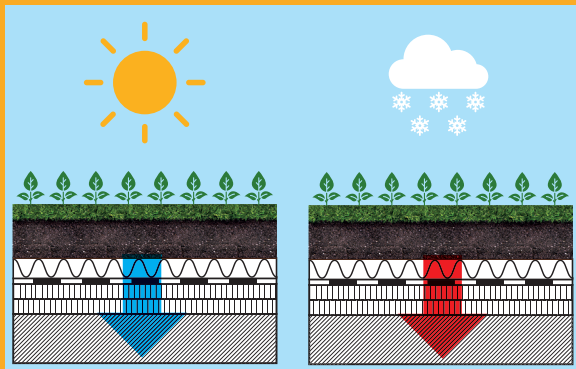

There are many sustainable and environmental benefits that the installation of a green roof can provide some of these are:

Improved air quality

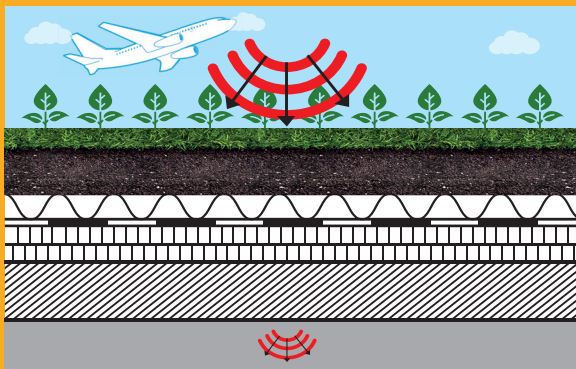

Reduction in stormwater runoff intensity

Improved thermal performance in different seasons

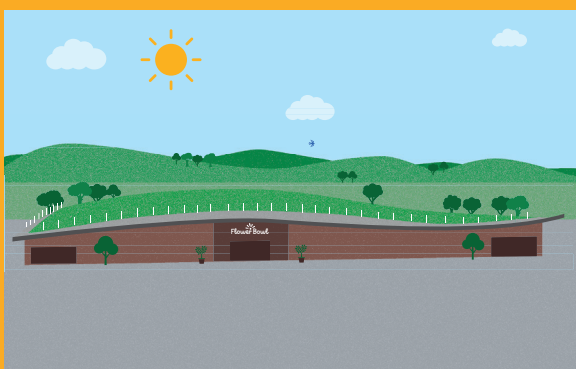

Reduction of the Urban Heat Island effect

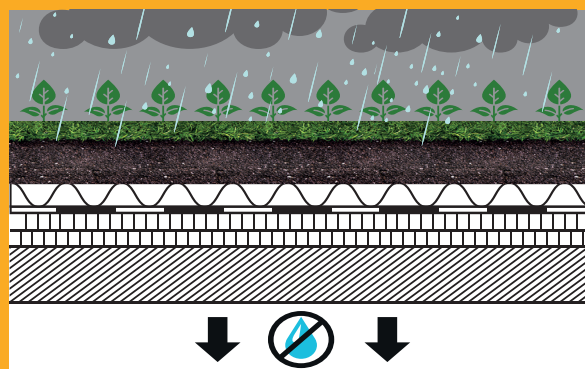

Noise reduction

Improving biodiversity in nature

Increasing views of nature with environmental masking

Extends the life of the waterproofing

For more information please contact your local Area Technical Manager or visit our website [www.sika.co.uk/greenroof](http://www.sika.co.uk/greenroof)
