

PRODUCT DATA SHEET

SikaRoof® Sedum Blanket UK

UK grown vegetation blanket for use with Green Roofs

PRODUCT DESCRIPTION

Pre-cultivated UK grown vegetation blanket, containing 12 species specifically chosen for extensive green roof applications. Grown on a 25mm substrate base on a carrier layer.

USES

- Low maintenance solution for use in extensive green roof build up

CHARACTERISTICS / ADVANTAGES

- High quality Sedum Blanket
- Carefully selected mix of 12 sedum species
- Shallow rooted and non-invasive vegetative cover

PRODUCT INFORMATION

Chemical Base	12 Sedum species Sown: Sedum acre, Sedum album, Sedum ellacombianum, Sedum floriferum, Sedum hybridum, Sedum middendorffianum, Sedum montanum, Sedum Pulchellum, Sedum reflexum, Sedum selskianum, Sedum sexangulare, Sedum spurium	
Packaging	50m ² of SikaRoof® Sedum Blanket UK on a pallet	
Shelf Life	SikaRoof® Sedum Blanket UK should be installed within 24-48 hours of delivery (temperature dependant)	
Storage Conditions	All living materials must be installed within 24 hours of delivery	
Length	2m	
Width	1m	
Effective Thickness	Plant height is 20-50mm, depending on growing stage of the sedum	
Unit weight	<u>Dry Weight</u>	<u>15 kg/m²</u>
	<u>Wet Weight</u>	<u>20 kg/m²</u>

VALUE BASE

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

LIMITATIONS

- Green roof systems include living products must be installed on day of delivery and watered immediately upon installation. If watering is not implemented immediately and for the first 12 weeks in situ, Sika Ltd cannot take responsibility for the growth and success of the vegetation. This is especially important during the Spring and Autumn period each year. For pitched roofs over 7.5 degrees, we would recommend an irrigation system to be installed with the roof.
- Where it is not possible to install the blanket on the day of delivery, the blankets must be unrolled and watered for overnight storage and installed as soon as possible.

ECOLOGY, HEALTH AND SAFETY

REGULATION (EC) NO 1907/2006 - REACH

This product is an article as defined in article 3 of regulation (EC) No 1907/2006 (REACH). It contains no substances which are intended to be released from the article under normal or reasonably foreseeable conditions of use. A safety data sheet following article 31 of the same regulation is not needed to bring the product to the market, to transport or to use it. For safe use follow the instructions given in the product data sheet. Based on our current knowledge, this product does not contain SVHC (substances of very high concern) as listed in Annex XIV of the REACH regulation or on the candidate list published by the European Chemicals Agency in concentrations above 0,1 % (w/w).

APPLICATION INSTRUCTIONS

Installation should be carried out in conjunction with the Sika Green Roof Installation Guide.

APPLICATION

- All living materials must be unloaded immediately and installed within the 24-hour period after delivery to the site. Failure to do so will risk the vegetation deteriorating and create a poor roof finish
- If it is a large roof, it would be recommended that the supporting build-up of the drainage layers, filter fleece and substrate is completed before the live material is delivered to the site, minimising vegetation stand time.
- The optimum period to install a living system is Spring/Autumn. Extra care must be taken during the summer period to ensure that the blanket system does not overheat during transportation or standing period. Extra irrigation may be required during the summer months, these are discussed below.
- The installed green roof systems must be thoroughly watered in, initially at a rate of 10-15 litres/m². Irrigation should take the form of complete system saturation at least once a week in the first 12 weeks following installation. These same steps should be taken during prolonged periods of hot and dry weather.

Should temporary irrigation be in place, we recommend the following:

- Regularly check that the sprinklers are correctly positioned, prevailing wind may affect coverage.
- Regularly check that the tank water is suitable for the roof irrigation.
- If the water becomes contaminated, turn off the irrigation immediately and drain the system.
- With the onset of winter, the system will need to be drained and decommissioned.

MAINTENANCE

Living roofs with good growing conditions will need annual maintenance for best results. This after-care will involve Spring weeding and Autumn strimming each year.

LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
